How to Clear ASYCUDA SOClass Cache from a Windows Operating System

To clear the ASYCUDA cache (called SOClass cache, SOClass being the application server where ASYCUDA is plugged in) you have to:

Note: This user guide has been created on a Windows 11 operating system but the same steps can be reproduced for Windows 10, 8 and 7 machine.

1. Log out from ASYCUDA client

2. Access your Windows File Explorer
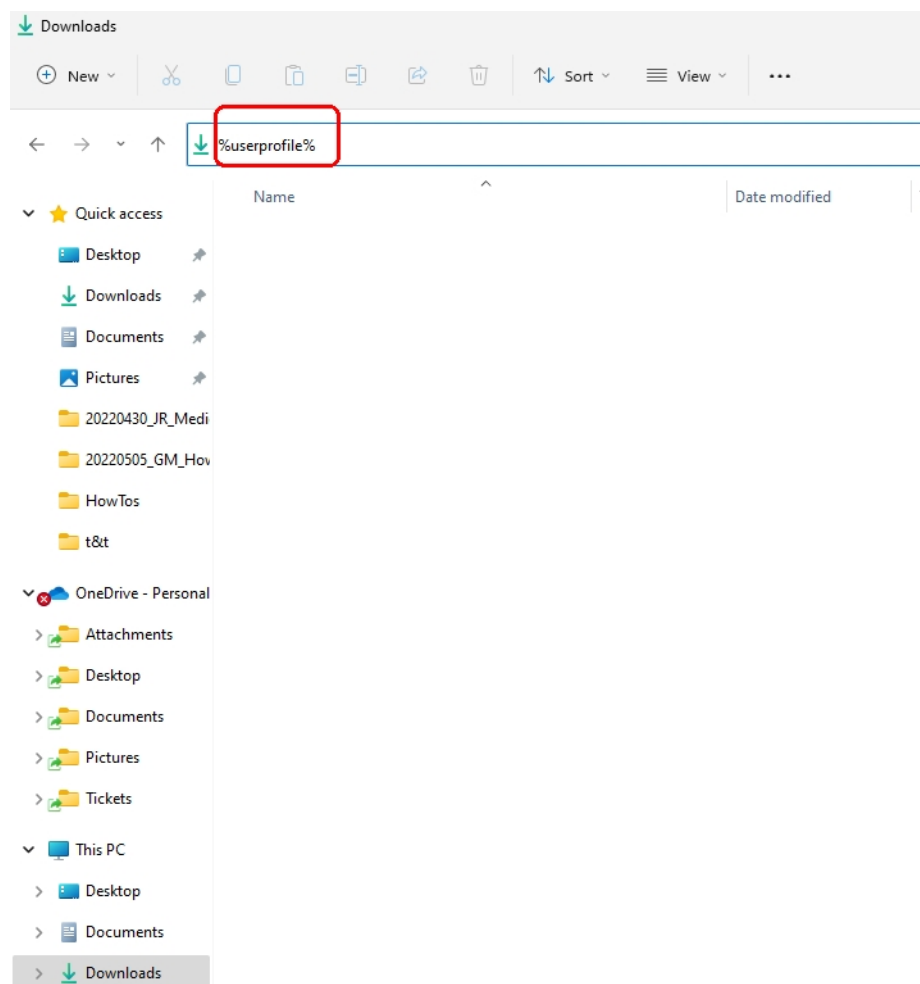

3. In the Address Bar type %userprofile% and press enter

Figure 1 - File Explorer

4. You will be redirected to the connected Microsoft Windows user's profile folder (The typical user path is C:\Users\Username)
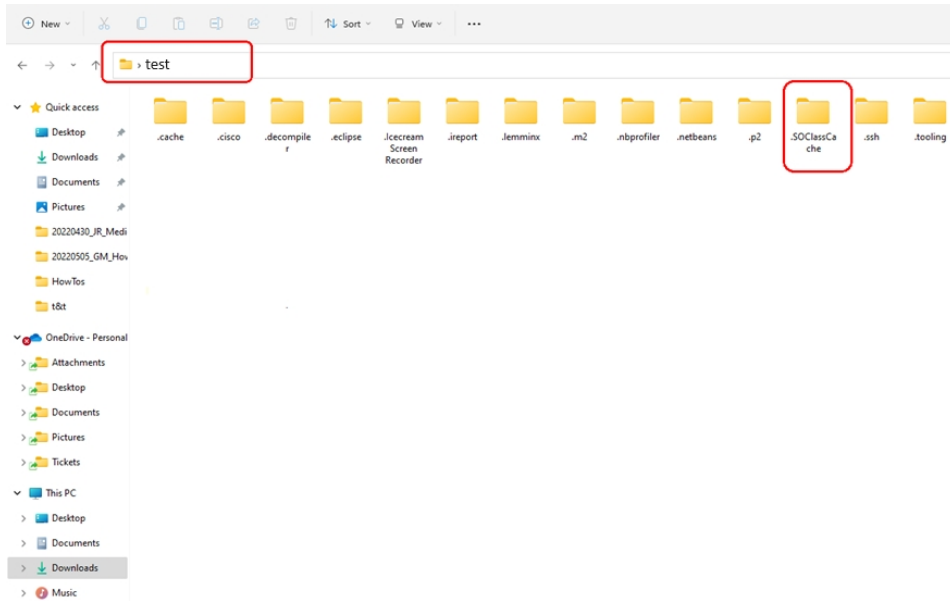

Figure 2 - User profile

5. In the user's profile folder identify the folder ".SOClassCache" and delete it.

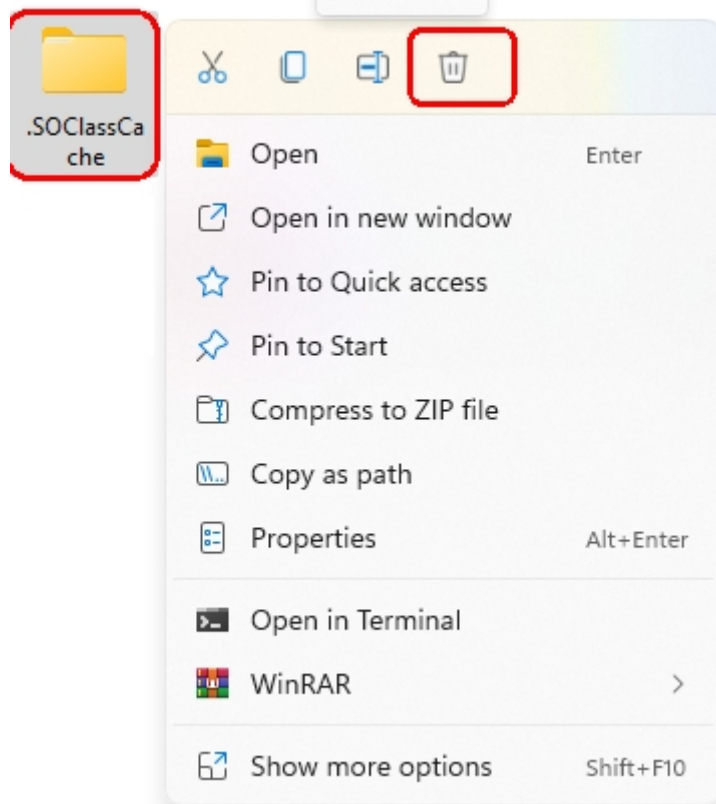

Figure 3 - Delete

6. On the next ASYCUDA login the subfolder ".SOClassCache" will be recreated and populated with the required data structures.

Note: This user guide has been created on a Windows 11 operating system but the same steps can be reproduced for Windows 10, 8 and 7.
